

15TH ANNUAL BULL SALE

Great Lakes Beef

CONNECTION.

1:00 PM ET **MARCH 8** 2025

Clare, Michigan - JC Simmentals Sale Facility

BREED LEADING GENETICS AT SENSIBLE PRICES

WELCOME TO THE SALE

Dear Cattle Enthusiasts, Friends & Neighbors,

Welcome to our 15th Annual Great Lakes Beef Connection Bull Sale. First, I want to thank you all, both new and loyal customers for your support and interest in our program. From the bred heifer sale in the fall to the bull sale last spring, we truly appreciate it! This is our 44th year in the seed stock business and all 44 years have been in the Simmental and Sim Angus breed, (that, we are proud of).

I also want to take a minute to thank all the people that help Connie and I run this ranch. Aaron, Caley, Kolton, Uncle Jim, Preston & Tony. Your dedication and hours feeding, bedding pens, in the tractor seat, fixing and building fence is greatly appreciated and very valuable to our success.

We Breed and Develop our cattle with the commercial cattleman in mind. These bulls are developed slow in big lots, they are out in the element, not housed in buildings. These bulls will work as hard as you do! We stand behind every bull we sell.

As your Seed Stock Provider, we do everything in our power to give you the most predictable, Cutting-Edge Genetics with all the data possible. Every bull in this offering is a product of RightMate. I would encourage each and every one of you to read the page in this catalog talking about the RightMate Accredited, G+,ACE,ATM.

We are truly blessed to have the Allied Team in our corner. They are easy to work with, they help us with marketing, genetic selection and purchases. Please feel free to call and visit with any of them.

-Join Us- We hope to see you at our open house March 1st from 11am to 3pm, and again SALE DAY March 8th, at 1pm

John Miller and the whole GLBC group

The Benefits of Buying From Great Lakes Beef Connection:

- Free Feeding until May 1
- BVD-PI Negative
- Fertility Tested
- Sight Unseen Guarantee
- Genomically enhanced EPDs on Every Bull
- Customer Feeder Cattle Marketing Assistance
- Bulls are developed slow
- Rotationally grazed on 80 acres of native grass until the end of November

Sale Terms and Conditions

All cattle sell under the Terms and Conditions of the American Simmental Association and the American Angus Association. Terms available sale day.

EPDS

All EPDS are the most current BOLT at the time of printing conducted by IGS and the American Simmental Association. Please note that EPDs may change from the time the sale catalog is printed until registration papers are transferred.

Announcements

Announcements made sale day and from the auction block during the sale take precedence over printed material associated with this sale. All persons who attend this sale do so at their own risk, legal or otherwise, for their safety or the behavior of the animals. The owners of Great Lakes Beef Connection, J/C Simmentals and the sales staff assumes no liability for property loss or accident that may occur.

Trucking

Free trucking on all Michigan Bulls. FREE Delivery to central points for the remainder Continental US on gross purchases over \$10,000.

GLBC will feed your bull free until May 1. We recommended that you insure your bull if you leave them. \$100 discount if you take your bull home sale day.

Semen Interest

Sellers are retaining 1/3 semen interest in all bulls selling for under \$20,000.

Sellers are retaining 1/4 semen interest in all bulls selling for over \$20,000.

Selling 100% possession and 100% salvage value.

Insurance

Livestock Insurance will be available sale day and is recommended.

GLBC encourages buyers to purchase insurance on the bulls not immediately delivered. Warranty and guarantee of the bulls will be covered by the breeder of the individual bulls.

15TH ANNUAL BULL SALE

MARCH 8 2025

CLARE, MICHIGAN AT 1:00 PM ET

JC Simmentals Sale Facility

Satisfaction Guaranteed

100% satisfaction guarantee on sight unseen purchases.

Bull Development

We developed the bulls on a high roughage diet for 3.0 pound per day gain in large open lots to ensure adequate exercise. We believe this adequately conditions the bulls for breeding, with sound feet and leg while enabling them to exhibit their gain ratio. We feel this type of development will insure longevity for the new owners.

Herd Health

All cattle sell with proper interstate health papers. All sale cattle have been Vaccinated with IBR, BVD, PI3, Vibro Letpo 5, Pasteurella, 7 way blackleg and poured with Ivomec. All Bulls have been tested BVD-PI Negative. All bulls have been fertility tested, scrotal measurements taken and sell as guaranteed breeders. Our cow herd is tested annually for Johnes Disease and Leukosis.

First Season Breeding Guarantee

Every bull in the sale carries a 100% guarantee and warranty for the first breeding season 90 days from the first turn out date provided the bull is managed for proper and acceptable nutritional and physical health.

In the event a customer has any problem with a bull (health, injury or death) prior to or during the bulls first breeding season, the customer should immediately contact Great Lakes Beef Connection to report the claim.

A veterinarian statement will be required and the bull may be required to be returned if deemed necessary. A replacement bull of mutually agreed upon quality will be provided if available or the customer will be given a credit for the purchase price of the bull less a salvage value of \$1,000, to be used in future sale.

Great Lakes Beef Connection will not be responsible for any settlement amount exceeding the purchase price of the bull.

BREEDING SEASON IS DEFINED AS THE 90 DAY PERIOD FOLLOWING THE FIRST TURN OUT OF THE BULL.

Catalog Codes

BB = Homozygous Black

HB = Heterozygous Black

DB = Double Black

NDR = Non-Diluter Red

PP = Homozygous Polled

HP = Heterozygous Polled

DP = Double Polled

P/S = Polled/Scurred

PB = Purebred

SM = Simmental

AN = Angus

AR = Red Angus

DDF = Developmental Duplication Free

DDC = Developmental Duplication Carrier

All potential DD carriers will have test results available sale day.

A Note from Our Nutritionist...

Welcome to the 15th annual Great Lakes Beef Connection sale. John, Connie and the crew always do an excellent job raising, testing, and bringing a quality group of bulls for your selection. I have worked with John for over 10 years and continue to be impressed with their program and the quality of people behind it. Good cattle and good people find success and the Great Lakes program is no exception. The Great Lakes cattle continue to find success with seedstock and commercial cattlemen across the entire country, in a wide range of environments.

One of the keys to the success of these bulls is the way they are developed. Most bulls in the Midwest are developed on a high concentrate type ration, greater than 65% concentrate in many cases. The Great Lakes bulls are truly developed on a high roughage ration, greater than 60% roughage! These bulls were ran on grass until the end of November with a small amount feed and then gradually stepped up to their 65% roughage ration after that point. The bulls always had access to some free choice roughage when they were confined. In confinement after December, the bulls still had access to amply exercise in a 10 acre trap. This type of ration, with that much exercise should produce an average daily gain of around 2.75 lb/day. However, these bulls still gained 3.26 lb/day. That is very impressive from a nutritional standpoint.

I am very confident in the Great Lakes development program. These bulls are developed for the long run, in whatever environment where they have to work. Buy them with confidence. Please feel free to contact me with any questions about their development program.

DAN LARSON, PHD || GREAT PLAINS LIVESTOCK CONSULTING || 402-560-4052

Improved Buying Confidence with Greater Genomic **ASSURANCE**

Access to more and better information has always been key to making wise decisions. The evolution and improvement of genetic evaluation tools too has given us an ever-clearer picture of the true genetic makeup of cattle and thus a better view of the value proposition. RightMate, powered by Top Genomics LLC is taking the evaluation of genetics and genomics one giant step further. By combining specific genomic information with the long-proven value of EPDs, this new advancement in technology improves our depth and precision when evaluating the actual ability to transmit value and profit.

The 3 Accreditation Logos below are designed to simplify bull selection and improve buyer confidence by more accurately describing the genetics offered and by reducing risk. What this means to you as a customer is a much greater assurance that you are getting both what you want and need from the genetics you purchase. What it means to your seedstock provider is access to RightMate technology that simply sets them apart from the rest of the industry.

ACCREDITED GENOMIC PLUS – For the majority of producers who simply need consistent and balanced genetic improvement, without genomic setbacks, G+ Accredited bulls should be on your list for premium purchase. These sires will absolutely move you forward for both cost reduction and income producing traits and substantially reduce risk when compared to all other evaluation programs. It's simple, the right genes are in these bulls to help secure a profitable future and they have great EPDs to match!

ACCREDITED CALVING EASE – Simply find bulls with the ACE logo for third party Accredited, secure Calving Ease bulls. Though we have had tools in the past to assist in choosing heifer bulls, we've never had one nearly this effective. The reduced risk that comes with this genomic certification will simply make your decisions easier and your heifer calving season more successful. Purchase special purpose ACE bulls with confidence. They will deliver consistent and predictable calving ease.

ACCREDITED TERMINAL MATE – Just like an ATM machine makes it simpler to access your cash, the ATM Logo highlights bulls accredited to generate extra cash income as soon as your next calf crop! These bulls are meant specifically to use only on mature cows and for the purpose of adding performance, pay weight and end product value to market.

A NOTE FROM THE SALE MANAGER

Welcome Cattlemen to the Great Lake Beef Connection Bull Sale. 2025 has brought an immense amount of promise for our country and the cattle business. Strong feeder cattle prices, short supply, and incredible demand for US Beef has created fruitful times for cow calf producers both near and far.

Hats off the genetic providers in creating the very best Great Lakes Beef Connection offering to date. Genetic value and striking phenotype can be found from cover to cover in this 100 head sale. The genetic providers have never shied away from the use of progressive and adapting the use of technology to provide more value to their customers. Every bull has been through a magnitude of genomic screening and phenotypical evaluation to ensure GLBC customers are getting the best of the best. If you are a customer, we would highly encourage visit with the genetic providers to ask about the services they provide to bull customers to ensure success. Countless loads of feeder calves have been purchased in partnership from GLBC customers, a great bull warranty, and affordable delivery is just a few of the many services the GLBC providers excel at.

The bulls featured in the 2025 sale will be rivaled by few offerings in terms of genetic value across the country. Thirty percent of the bulls are a product of the robust and aggressive embryo transfer program who propagates the best females the program has to offer. If you have been on the fence before about coming up and viewing the offering we encourage you to make the trip you will be happy you did.

As always if we can be any assistance to you, please do not hesitate in reaching out to us for service. We hope to see you all March 8th in Clare, MI.

Sincerely,
Marty Ropp, Corey Wilkins and Jared Murnin

RIGHTMATE AND RIGHTCHOICE COMPLEX TECHNOLOGIES, SIMPLE APPLICATIONS

by Marty Ropp

In 2022, we are entering into our fourth full year of cooperation with Dr. Mahdi Saatchi and Top Genomics LLC on genomic selection opportunities poised to literally change the way we view genetic improvement programs. Our seedstock businesses have always been focused on providing a more profitable genetic product each new generation for the long-term success of our vital commercial customer base. These new, cutting-edge genomic services usher in a new world of potential to make producers and ultimately this industry more profitable. By combining the science associated with large effect gene combinations with the power of highly proven traditional genetic evaluation tools, new thresholds of performance and progress are being realized. RightMate prescribed mating technologies ensure maximum genetic progress for economically crucial traits, while at the same time reducing calf crop variation. The 2021 Gibbs Farms offering is a testament to the results of getting the matings more right, more often. The one-year level of improvement in value and uniformity is easy to see both physically and in terms of printed genetic evaluation.

Successful seedstock producers have been successful largely because they do a great job of selecting the next generation of sires. These selection decisions must be based squarely on the needs of their customers along with their own wise planning for the future of the beef business. RightMate just helps get the right bulls on a breeders list prescribed and mated to the most logical and genomically complimentary females. RightMate even helps producers to reduce and even eliminate expensive wasted matings. That's right, wasted matings! To achieve maximum progress and greatly reduce variation, some matings just need to be avoided, even when both parents are genetically valuable independently and could contribute progress simply with different breeding choices. Our data is showing clearly that the bulls you choose not to mate to specific females is almost as important as finding the perfect choice for each one. The results have exceeded even our hopes.

RightChoice programs are based on the same genomic improvement principles, but are designed to make commercial sire selection simpler and more precise to meet the needs of our most important customers. Simply choosing the shields of certification genomically assigned to each possible choice in this offering takes out the selection guesswork and helps commercial customers find the genetics that address needs more precisely and more often. The large effect genes, the EPDs and all performance information is included in the designation of ACE, G+ and ATM individuals. With this technology applied, customers can more easily identify and purchase the seedstock they want without always having to work through 20+ pieces of provided information. Just pick the bulls you like from the group whose logo fit your needs. Success simplified.

Our focus and commitment to the commercial beef business highlighted now by RightChoice and RightMate technologies, has not and will not change. Today's Allied business offers opportunities to enhance genetic improvement through genomics, add market value to customer feeder cattle production, offer some of this industry's best through All Beef and Allied Semen and Genetics, provide fast and efficient data services from Data Genie, offer seedstock marketing assistance and provide the Commercial industry with future focused genetic planning from our experienced and growing staff. Becoming full service genetic providers has always been our goal, because it's always been important.

PLEASE JOIN US

OPEN HOUSE

MARCH 1 || 11 AM - 3 PM

We invite you to come preview the bulls and enjoy some good company.

Any buyer that views the bulls at the farm or open house will receive a \$50 credit for each bull they purchase.

ABOUT BULL DEVELOPMENT

Developed SLOWER, Keeping your Best Interest in Mind

This is the third year to make some modifications to our bull development in order to enhance bull longevity and better protect your investment in our genetics. Our goal is to develop the bulls in a manner where they can show off their genetic potential but not sacrifice the longevity of the bulls. We want customers to be able to recognize their bulls after turn-out.

This year the bulls were weaned the end of August to the first of September. The bulls were weaned on an 80-acre grass pasture. The bulls were rotationally grazed on this pasture until the end of November with a small amount of feed. In December when brought to their development lots they still had 10 acre traps for ample exercise. The bulls always had access to some free choice roughage. (1st cutting grass hay) We can say with confidence this is the most athletic and structural correct bulls we have ever marketed. WE SACRIFICE some performance in terms of yearling weight with this practice but feel the bulls are in perfect shape at sale time. We understand bulls are a significant investment. We want our development process to increase bull longevity and the bulls you purchase be productive for years to come.

JC043M || Sells as Lot 1.

JESSE JAMES X 230K

Breed leading genetic value, incredible type, and an outcross pedigree on the top side best summarizes a great lead off bull for the 2025 GLBC offering. He will be an incredible heifer bull prospect, who will sire first class maternal and carcass traits. His structure, balance, and foot quality has made him a favorite of ours for quite some time.

WS Jesse James 31J || Sire of Lot 1.

COWGIRL 917G SONS

A pair of maternal brothers out of the 917G donor female. The brothers represent some of our favorite pure-bred bulls in the entire offering. These bulls' length, striking phenotype, and genetic value will make them both "breeder bull candidates". We can not speak highly enough about the 917G donor in terms of type, structure, and udder quality she is the standard we strive for at GLBC.

GLOBAL X 1033J

1033 has been a standout since weaning and has a herd bull look and presence. He is the first progeny of the 1033J who is quite possibly the best Essential female you will find. The bull comes with tons of rib and body, flawless structure, and is just simply the total package. He is one of the most fault free and complete bulls in the 2025 sale from both a number and phenotype standpoint.

322H SONS

The TJ 322H donor female has once again knocked it out of the park for the Oman program. The trio of bulls come with a balanced genetic profile and very pleasing type. We feel these bulls will move ahead from both a female retention standpoint while adding value to terminal bound progeny. Be sure to circle the 322M son in your book this younger Essential grandson has all the making of a great herd bull.

EFFECT OF SIRE BREED ON SALE PRICE OF BEEF STEER CALVES

Superior Livestock Auction, Summer 2020^c

SimAngus™-sired steer calves sold through Superior Livestock Auction in summer 2020 earned **more at sale time** than all other calves.^{ab}

It's no wonder the percentage of **SimAngus™** calves marketed through the industry's largest video auction has grown **eightfold** since 2010.

Want low-risk, high-potential calves with earning potential?

STAND STRONG SIMMENTAL

406-587-4531 • simmental.org

^a For lots of 50 head or more. ^b Kansas State University, December 2020, Superior Livestock Auction data analysis of 3,280 lots, 394,900 head of beef calves marketed during summer 2020. (P<.0001)
^c Lots that qualified for breed-related programs were excluded from the model due to potential confounding effects with sire breed analysis and, for many, few lots in the data.
^{d, e, f} Means without a common superscript differ (P<.05). Lots of calves in breed-identified groups were sired by bulls from the respective breeds and out of dams with no Brahman influence.

EVITA 18E SONS

Hook's 18E has been a special cow for our program placing breeder bulls near and far. We sold her in the 2024 Great Lakes Beef Connection Sale to Lucas Cattle Company in Missouri. These are the last matings we will have and her sons will once again be favorites on sale day. The marketability, phenotype, and quality of the 18E pedigree is on full display with her powerful sons.

WS JESSE JAMES 31J

We are always searching for something different from an out-cross pedigree standpoint and we are proud to have sampled WS Jesse James in our program. The bulls excel at maternal traits, phenotype and gives some new blood for old customers. We feel like their genetic value and kind will make them highlights for ranchers on sale day.

LBRS GENESIS G69

First class growth, payweight and power can be found in a great set of Genesis sons we have to offer in 2025. The bulls are absolute brutes for power and will be certain to add payweight and value to their progeny. If you are looking to market a heavier more valuable set of feeder calves these Genesis sons should do the trick.

GIBBS 9114G ESSENTIAL

Essential is proving to be a genetic superstar who rivals any bull in the business for the spread he offers from birth to yearling. The sons are wonderful structured, easy to look at, great for docility and will no doubt sire cattle who create premiums.

Heterosis

by Marty Ropp

Years of research and industry proofs stand unchallenged. Crossbred calves simply weigh more and crossbred commercial cows are absolutely more productive and profitable than straightbred commercial cows. End of story! In fact, the economic advantages are so large, one could argue that anyone discouraging commercial herds from using planned crossbreeding is just not interested in their profits or sustainability.

Historically, the promotion of crossbreeding has focused on the simple direct effects of individual heterosis. This is because those improvements are immediate, easy to see and impressive, often resulting in increased weaning weights of 4 to 5%. That translates in a 15 to 35 more pounds of calf weaned next year compared to this year, just with your first cross on straightbred cows. Far greater economic impacts of crossbreeding however are realized in the added profit produced by crossbred commercial cowherds designed with a plan for profit. "Plan" is the key. Just like in all facets of the commercial cow calf business, poor decisions in crossbreeding programs for breed, source or individuals are not acceptable, especially today with better information available and more value at stake.

So, how much more valuable is a crossbred commercial female vs. one that is not? Research repeatedly shows a lifetime production increase for crossbred females of between 20 to 25% because of greater fertility, longevity and improved maternal environment. Hundreds of publications have demonstrated this advantage dating back to the 70's and there is literally no research that dispute these results. Simply put, if an average straight-bred female produces six, 500 pound calves in her life, the result is about 3000 lbs. of gross production. In comparison, based on years of data and research, her crossbred counterpart will deliver between 3600 and 3750 pounds of calf weaned because on the average she produces an extra calf in her lifetime and each calf is heavier. Depending on price, that added performance generates somewhere at or above \$1000 more total dollars of value or more than \$100 per year of added income. The benefit of needing to retain 10-15% less replacement heifers each year and calve substantially fewer 2-year-olds each season is a huge bonus as well.

I realize that the previous example is based on maximum heterosis which is achievable through advanced management or systems approaches, but can be challenging to maintain for some operations. For greatest simplicity and practicality, consider composited seedstock with the breeds and percentages that fit your production and marketing situation. They come with retained heterosis and profit enhancement bred in. Even at 50-75% of the maximum possible heterosis, the increased profit composites provide is difficult to match by any other enterprise change and the long-term improved uniformity of both calf crop and cow herd just makes everything you do easier.

HOOK'S JOURNEY 7J

Not your typical heifer bulls are found in the Journey sire group. The bulls are high CE, high marbling and are well above breed average growth. Their genetic potential for multi trait excellence is unrivaled! If you want end product value and great maternal traits go home with a Journey son.

Great Lakes Sired Feeder Cattle Finding Success

As we begin year five of our quest to help customers market their feeder cattle in order to enhance the value of our genetics. We are happy to report our cattle are finding success at both the feedyard and the packing plant.

We understand the majority of customers are unable to have the quantity of cattle in order to market full pots or retain ownership. However, by co-mingling customers Great Lakes Beef Connection sired calves we feel this is a good path to receive more value for our smaller producers. If you are a larger producer who has pot loads, feel free to contact us we have a large interest in helping you market and place your feeders as well.

*Save the Date -
October 21, 2025
West Branch Feeder Cattle Sale.*

For additional pooling of Michigan feeder cattle, contact us or Jimmy Lambert 231-920-8263.
